Data protection for SMEs

Rising data breaches and stringent compliance mandates add pressure on SMEs to protect sensitive data either on-premise or in cloud environments.

Achieving this is imperative to maintaining your business, your reputation and your supply chain integrity.

Challenges

Encryption can be daunting and highly complex when multiple environments and data sources are involved.

Many SMEs may not know where their sensitive data resides or have the resources and skills to deploy the required technology, all adding to these concerns.

Data → Security
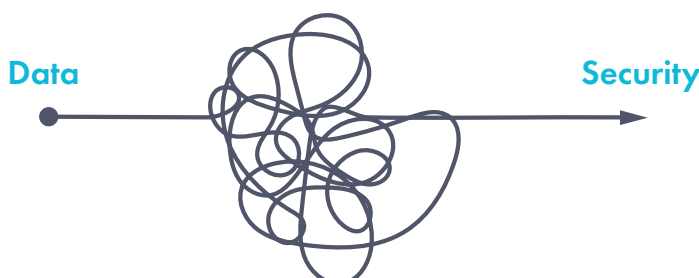

Technology

Data Discovery, Encryption and Key Management is a proven technology that allows SMEs to secure themselves from data breaches and comply with compliance mandates.

Solution

Thales SME Cloud Platform and Thales SME On-Premise Platform are for any SME needing to discover and protect sensitive data and adhere to numerous compliance mandates.

In a single solution, this unique offering brings together the industry's leading Key Management and Data Protection products. With a choice of encryption 'connectors' SMEs can encrypt data sources including: File Servers, Databases, Virtual Servers and Public Clouds.

Optional benefits

Add Thales CipherTrust Data Discovery and Classification

With the addition of Thales CipherTrust Data Discovery and Classification, you can discover where your sensitive data resides and then determine if you want to encrypt it.

Discover   Protect   Control

Watch the demo

See how easy it is for you to protect your sensitive data and comply with mandates.

The Thales SME Cloud Platform and SME On-Premise Platform are founded upon the Thales CipherTrust Data Security Platform. The demo illustrates the benefits and capabilities that are included.
