Building a future we can all trust
About Thales

The people you rely on to safeguard your privacy rely on Thales to protect their data, the cloud and software. When it comes to data security, organizations are faced with an increasing amount of decisive moments. Whether the moment is building an encryption strategy, licensing software, providing trusted access to the cloud, or meeting compliance mandates, you can rely on Thales to secure your digital transformation.

Providing a safer, more secure world powered by the cloud, data and software

Data protection against increasing threats
According to the Thales Data Threat Report, 60 percent of organizations have been breached sometime in their history. This is increasingly serious when nearly all organizations will use sensitive data in digitally transformative technologies. However, less than 30% of companies have deployed encryption to protect data in digital transformation environments. Thales helps businesses and organizations defend their data in a digital world where there is no defined perimeter with advanced encryption, key management and tokenization solutions.

Enabling a world powered by software
Just as important as the cloud, software is increasingly crucial for business performance and new revenue opportunities. This is especially true for businesses that are shifting away from hardware as their main revenue driver in favor of software. Our software licensing and monetization solutions help manufacturers, device makers and software companies license, deliver and protect their software in order to generate new revenue streams, improve operational efficiency, increase customer satisfaction and gain valuable business insights.

Trusted access in a zero trust world
Traditional security models operate on the assumption that everything inside corporate networks can be trusted. However, given the increasing adoption of cloud services and sophistication of cyber attacks, new security approaches are needed to ensure the individuals accessing cloud services and corporate resources can be trusted, verified and deliver on compliance mandates. Our access management solutions help organizations provide secure, trusted access to cloud services and applications with user friendly single sign-on and robust multi-factor authentication.

Security that integrates with your technology ecosystem
With one of the industry’s largest data protection technology ecosystems, Thales solutions integrate with the most widely used technologies to protect and secure access to your mission-critical applications and data. Through the Thales partner program, we have established partnerships with more than 500 global technology organizations who are committed to architecting solutions to meet secure cloud and digital transformation initiatives. Thales partners with leading resellers, system integrators, distributors, managed service providers and technology companies to meet the data protection and compliance needs of the most security-conscious organizations around the world.

Security for a cloud-first world
The cloud gives organizations the agility and efficiency to instantly introduce new services, expand operations, and enter new markets. But the lack of physical control of infrastructure brings a whole host of data security issues, including privileged user abuse, data leakage, regulatory requirements, and many more. Our solutions help organizations secure their cloud transformation, reduce breach exposure and achieve compliance with encryption and key management solutions that keep you in control of your data in any cloud while also providing simple, secure access to cloud services with integrated access management, authentication and single sign-on.
The people we all rely on to make the world go round – they rely on Thales

Today’s enterprises depend on the cloud, data and software in order to be confident in decisive moments.

That’s why the most respected brands and largest organizations in the world rely on Thales to help them protect and secure access to their most sensitive information and software wherever it is created, shared or stored – from the cloud and data centers to devices and across networks. Our solutions enable organizations to move to the cloud securely, achieve compliance with confidence, and create more value from their software in devices and services used by millions of consumers every day.

We are the worldwide leader in data and software protection, providing everything an organization needs to protect and manage its data, identities and intellectual property – through advanced encryption, access management and software licensing solutions. Whether it’s securing the cloud, protecting digital payments, or building software to power the Internet of Things, organizations around the globe rely on Thales to confidently accelerate their digital transformation.
Data Encryption & Key Management

Securing sensitive data is a priority for every organization. Whether your data is at rest, in motion, or in use, you can rely on Thales to enable the most effective encryption strategies for your enterprise environments.

Does your enterprise have an encryption strategy?

Data Discovery and Classification

The crucial first step in compliance is to understand what constitutes sensitive data, where and how it is stored, and who can access it. Data Discovery and Classification enables organizations to get complete visibility of sensitive data across cloud, big data, and traditional environments. Do you know where all of your sensitive data is stored?

Compliance & Data Privacy

Data security regulations present an increasingly complex challenge for global organizations. Wherever you operate and whatever the regulation, you can rely on Thales to help you achieve and maintain compliance, improving your security and managing your risk. Is your business ready for today’s data compliance challenge?

Access Management & Authentication

Moving applications to the cloud brings not only increased risks of data breaches but also the challenges of simplifying access for users and enabling compliance. Regardless of the size of your business, you can rely on Thales to deliver secure, trusted access to all cloud services. Do you have secure access to all of your cloud services?

Cloud Security

Confidence in data security is essential, whether you’re accessing cloud services or storing data across multiple cloud environments. You can rely on Thales to deliver simple, secure access and encryption solutions to protect sensitive data in any cloud. How will you secure your data in the cloud?

Software Licensing & Protection

Software is crucial for business performance and new revenue opportunities. As your company shifts from hardware to a software-based business, you can rely on Thales to generate new revenue streams, improve operational efficiency and gain valuable insights from your software. Can you deliver software the way your customers want to consume it?

Digital transformation is reshaping industries as more and more organizations look to build their businesses using the cloud, data and software. The success of these transformations will ultimately depend on whether these digital services, identities and transactions can be secured and trusted.

At Thales, we are at the heart of making this new digital world possible. As the worldwide leader in digital security, we protect more data, identities, software and transactions than any other company and enable tens of thousands of businesses and organizations to deliver trusted digital services to billions of individuals around the world.

What will be your decisive moment to protect your data and software?
Decisive technology for decisive moments

The people you rely on to safeguard your privacy rely on Thales to protect the cloud, data, and software. When it comes to data security, organizations are faced with an increasing amount of decisive moments. Whether the moment is building an encryption strategy, licensing software, trusted access to the cloud, or meeting compliance mandates – you can rely on Thales to secure your digital transformation.

Companies, governments and organizations rely on Thales to discover and protect their most sensitive data. Our advanced data encryption, key management and tokenization solutions enable customers to secure digital payments, achieve compliance, and protect and remain in control of their data wherever it resides – across the cloud, data centers, networks and hybrid IT environments.

Software Licensing
Software Delivery
Software Protection

The world’s largest companies rely on Thales to help license, deliver and protect the software in their devices and services. Our software licensing, entitlement management and protection solutions help companies across a wide range of industries generate new revenue streams, improve operational efficiency, increase customer satisfaction and gain valuable business insights from their software.
