Data Security for a Zero Trust World

Discover, Protect, Control

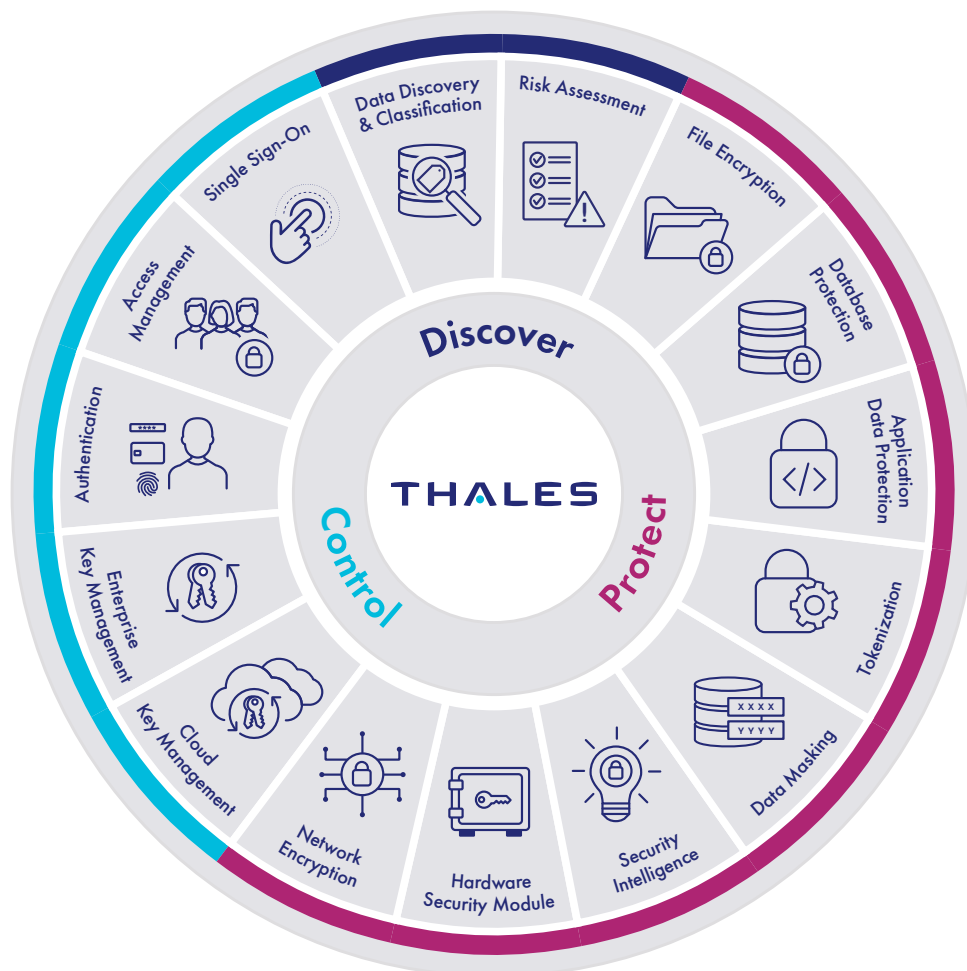

Data Security for a Zero Trust World

Organizations are adopting cloud services while making the most of existing IT infrastructures. They are also adapting to the challenges of a hybrid or remote workforce. This means the notion of a defined security perimeter is increasingly difficult to enforce. To operate securely in today's mobile and cloud-first world, organizations must protect their data and control who has access to it.

Thales is a global leader in data protection, access management, and authentication. We help the world's most trusted organizations simplify security for the cloud, achieve regulatory compliance, and reduce risk.

Our solutions to Discover, Protect, and Control critical assets enable organizations to modernize data security for a zero trust world.

You can rely on Thales to help you discover, protect, and control access to your sensitive data wherever it is – from the cloud, data centers, or networks.

Discover

**Find and Classify Your
Data Wherever it Resides**

Data security and regulatory compliance starts with finding and protecting sensitive data before hackers do. This can be complex because data can be in many forms and reside in many places – on-premises, in the cloud, and in back-ups.

Our advanced data discovery and classification services enable businesses, organizations, and governments worldwide to identify where their data is located, classify it by risk, and automatically apply robust security measures.

Protect

**Secure Sensitive Data at
Rest, in Motion, and in Use**

Our modern data security solutions allow organizations to protect all types of sensitive data across a variety of data stores, platforms, and IT environments. With our integrated encryption, key management, and hardware security module (HSM) platforms, organizations can simplify data protection and reduce operational complexity while remaining in control of their data wherever it resides.

In addition, Thales access management and authentication solutions protect identities – across the cloud, data centers, networks, and hybrid IT environments.

Control

**Simplify and Automate
Access to Sensitive Data**

Complexity only grows as more cloud platforms, services, users, and environments are added. This represents a major risk for organizations already facing a challenging security and compliance environment.

Our access management, authentication, and single sign-on solutions help organizations reduce the risk of breach by enabling simple, secure, zero-trust access to all your applications, while our centralized key management solutions streamline control across multiple on-premises and cloud systems enabling organizations to apply the right security control for sensitive data in virtually any situation.

Building a Future We Can All Trust

Digital transformation is reshaping industries as more and more organizations look to build their businesses using the cloud, data, and software. The success of these transformations will ultimately depend on whether these digital services, identities, and transactions can be secured and trusted.

At Thales, we are at the heart of making this new digital world possible. As the worldwide leader in digital security, we protect more data, identities, software, and transactions than any other company and enable tens of thousands of businesses and organizations to deliver trusted digital services to billions of individuals around the world.

Data Protection

.....

Securing sensitive data is a priority for every organization. Whether your data is at rest, in motion, or in use, you can rely on Thales to enable the most effective encryption strategies for your enterprise environments.

Access Management & Authentication

.....

Managing access to applications across the cloud and hybrid environments brings not only increased risk of data breaches but also the challenges of simplifying access for users and enabling compliance. Regardless of the size of your business, you can rely on Thales to help your organization thrive with simple, secure access to all your applications with authentication everywhere.

Cloud Security

.....

The cloud offers organizations many benefits including scalability, cost-savings, and improved collaboration. However, data breaches in and from the cloud are a real risk due to operational complexity caused by using many cloud providers. Thales can help your organization simplify, streamline and give you control of security for sensitive data in the cloud.

Compliance & Data Privacy

.....

Data security regulations present an increasingly complex challenge for global organizations. Wherever you operate and whatever the regulation, you can rely on Thales to help you achieve and maintain compliance, improving your security and managing your risk.

The Value We Provide

Reduce Risk & Achieve Compliance

.....

Our data protection solutions help you protect critical assets and accelerate time to compliance with consistent visibility of sensitive data, data stores, policies, and applicable regulations.

Streamline Operations & Reduce Complexity

.....

We help simplify data security operations with platforms that deliver more value and centralized control via a consolidated policy control planes across hybrid IT environments.

Accelerate Growth for Digital Services

.....

Our solutions help you build secure clouds so you can deliver new, trusted digital services with cloud and software options for easier access to the technologies with APIs to simplify deployments.

Helping you harness the extraordinary power of technology to build a future we can all trust

10 largest banks in the world

5 largest software companies in the world

10 largest retailers in the world

10 largest healthcare companies in the world

5 largest cloud service providers in the world

10 of the largest manufacturers in the world

About Thales

Statistics from Thales Cloud Protection and Licensing:

30,000

Customers around the world

750

Research engineers in 8 centers of excellence

180

Countries where we sell our digital security solutions

2,600

Employees in 50+ countries

350+

Partnerships with leading technology providers
