

Thales CipherTrust Manager for Odaseva Zero Trust Connect

As organizations expand their ecosystems, reliance on external applications and vendors grows. Each new integration increases exposure, as data leaving core systems by default is transmitted in clear text. This introduces considerable security and compliance risks. Recent incidents demonstrate the difficulty of controlling data once it moves beyond your environment.

Odaseva Zero Trust Connect is the only end-to-end encryption solution protecting your data leaving Salesforce. Combined with Odaseva no-view provider architecture, it elevates your data security to the highest degree. Advanced end-to-end encryption empower organizations to safeguard data, maintain compliance, and operate confidently within a secure, connected Ecosystem.

Encryption key management is what ultimately defines your data security standards, giving you ultimate control and ownership over the encrypted data. This is why Odaseva and Thales have partnered to provide Zero Trust Connect customers with choices in managing their data encryption keys for data leaving Salesforce.

Why leveraging **Thales CipherTrust Manager** for Odaseva Zero Trust Connect?

Simplified, Centralized Key Lifecycle Management

CipherTrust Manager simplifies key lifecycle management tasks, including secure key generation, backup/restore, clustering, deactivation, and deletion by enabling organizations to centrally manage encryption keys used for Odaseva Zero Trust Connect application and other products.

Enhanced IAM Security and Auditing Control

CipherTrust Manager role-based access provides control to keys and policies, multi-tenancy support, and robust auditing and reporting of all key management and encryption operations, strengthening the overall IAM security posture of Odaseva Zero Trust Connect. Together, Thales and Odaseva deliver the highest standards of data security. This partnership enables customers to separate key control from encryption and decryption operations, combining Odaseva Zero Trust Connect's ultimate level of end-to-end transit encryption with Thales' proven expertise in secure key management and storage.

About Odaseva

Odaseva is an Enterprise Data Platform that powers data security and data management solutions for companies running on Salesforce. With Odaseva, large global companies can enhance data resilience, ensure compliance and unlock the value of their data. It is designed and built specifically to solve the complex challenges of large-scale global organizations.

About Thales

THALES

Thales is a global leader in cybersecurity, helping the most trusted organizations protect critical applications, data, identities, and software anywhere, at scale. Through Thales' integrated platforms, customers achieve better visibility of risks, defend against cyber threats, close compliance gaps, and deliver trusted digital experiences for billions of consumers every day.
