

SafeNet Trusted Access and SailPoint IGA Solutions

Protecting and streamlining your IAM Environment

Securing your IAM Environment

Today's organizations are constantly under the threat of social engineering and phishing attacks which result in compromised user identities and lead to costly security breaches. Thales and SailPoint work together to offer a complete Identity & Access Management (IAM) solution for enterprises aspiring to modernize their identity frameworks. Together, Thales and SailPoint allow organizations to manage and secure applications, both SaaS and on-prem, while simplifying compliance and achieving productivity and efficiency in identity management.

Identity Governance and Access Management: Better Together

Securing identities and ensuring secure and convenient access to resources is a crucial component of a modern IAM approach. Stolen user identities can have real consequences, as they provide unfettered access to an organization. To protect themselves organizations must implement robust identity management to ensure a secure, compliant, and efficient environment.

The identity life cycle is comprised of two distinct functions, Identity Governance & Administration (IGA) and Access Management (AM). The purpose of IGA is to manage and monitor digital identities and automate assignment of access rights. Once the IGA framework has established the digital identity and its entitlements, AM enforces the access rights to resources and defines authentication requirements.

The best protection against the use of stolen or otherwise compromised credentials is strong adaptive access controls and multi-factor authentication that block attackers without disrupting legitimate users. SafeNet Trusted Access integrates easily with SailPoint to provide an elegant solution that balances security and usability to protect all user accounts from misuse at the identity perimeter while enhancing reporting and visibility for governance and compliance.

Highlights

Centralized Visibility

- Detect inappropriate access, policy violations or weak controls that put your organization at risk

Fast and Efficient Access

- Timely and frictionless access to business resources increases productivity, reduces workload at helpdesk without compromising security or compliance

Simplified Strong Authentication

- Automated workflows provide flexible, context-based authentication options to secure users mitigating the reliance on passwords

Protect Everything

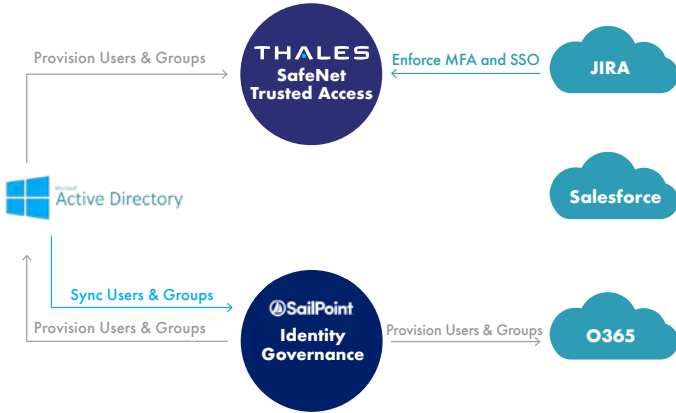

- Extend single-sign-on authentication to the SailPoint solution and other cloud applications, enabling centralized, secure access with a protected identity

How the Joint Solution Works

SafeNet Trusted Access integrates with the SailPoint platform to allow businesses to scale securely in the cloud, simplify compliance, and secure the access point.

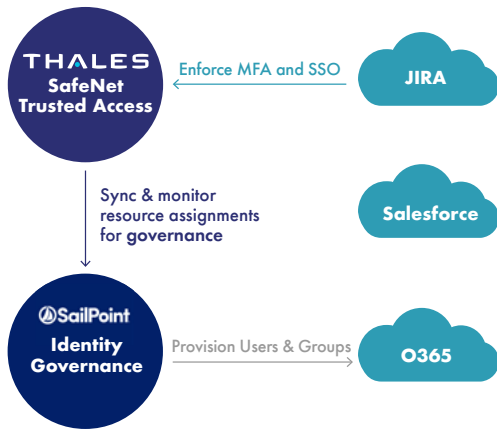

Scale securely in the cloud

SafeNet Trusted Access enforces access policies and authentication for SailPoint entitlements and other lifecycle events: For example, when SailPoint defines entitlements and propagates them to the user directory, SafeNet Trusted Access triggers an automated workflow of adaptive access policies to enforce the right access policy for the user when they log onto a given application.

Simplify compliance

SafeNet Trusted Access integrates directly with SailPoint to allow for automated discovery of access events. SailPoint compiles this information into its reporting to ensure compliance with corporate policies and regulations.

Security at the access point

SafeNet Trusted Access enforces access policies and the appropriate level of authentication to admins accessing the SailPoint consoles, protecting them from unauthorized access and reducing the risk of data breach.

Add Application

Key Benefits

Together, SafeNet Trusted Access and SailPoint identity governance solutions offer enterprises the ability to improve governance through granular reporting, apply access controls to cloud applications and protect SailPoint at the access point, ensuring only authorized admins can log onto the solution. By leveraging the best in class Identity Governance and Access Management, organizations can centrally manage the identity lifecycle and access security for their cloud environments.

About SailPoint

SailPoint, the leader in identity management, delivers an innovative approach to securing access across the enterprise with the SailPoint Predictive™ platform. With SailPoint, enterprises can ensure that everyone and everything has the exact access they need, exactly when they need it, intuitively and automatically.

About Thales Access Management

Thales's industry-leading Access Management and Authentication solutions let enterprises centrally manage and secure access to enterprise IT, web, and cloud-based applications. Utilizing policy based SSO and universal authentication methods, enterprises can effectively prevent breaches, migrate to the cloud securely and simplify regulatory compliance.

About Thales

The people you rely on to protect your privacy rely on Thales to protect their data. When it comes to data security, organizations are faced with an increasing number of decisive moments. Whether the moment is building an encryption strategy, moving to the cloud, or meeting compliance mandates, you can rely on Thales to secure your digital transformation.

Decisive technology for decisive moments.
