Applying modern access management to legacy apps

Securing your SAML Gateway

Today's organizations are constantly under the threat of costly security breaches. The need for remote access to corporate resources has grown exponentially. Providing secure and simple access to internal resources, for both employees and third-party contractors, regardless of their physical location and device, requires support for a wide range of remote access requirements.

Access Management and SAML Gateway: Better Together

Thales and SSOGEN work together to authenticate users and provide secure access to SAML and non-SAML apps regardless of whether the apps are in the cloud or on-premises.

Thales SafeNet Trusted Access (STA) provides powerful protection by enforcing rigorous granular access policies at the access point for single-sign-on with adaptive and multi-factor authentication, while SSOGEN makes on-prem legacy apps accessible through its gateway. Combining STA with SSOGEN, organizations can apply authentication and modern access management to both cloud-based and legacy apps.

Highlights

Protect More On-prem and ERP Applications

Extend the reach of STA—apply authentication and SSO to complex on-prem applications including Oracle EBS, PeopleSoft, JDE and SAP.

Simplified Strong Authentication

Automated workflows provide flexible, context-based authentication and a broad range of strong authentication options to mitigate reliance on passwords.

Convenient and Secure

Convenient yet secure access to business resources increases productivity and reduces workload at the helpdesk without compromising security or compliance. Supports BYOD and BYOPC initiatives.

Protect Everything

Apply a Zero Trust security model by extending policy-based access, single-sign-on, adaptive authentication, and multi-factor authentication to your cloud and on-prem applications.

SSOGEN enables organizations to access non-standard on-prem applications, even ERP applications such as Oracle e-Business Suite, PeopleSoft ERP and SAP.

STA integrates easily with the SSOGEN SAML Gateway to provide an elegant solution that balances security and usability to enable IT to centrally manage access security for all apps, while providing the best user experience to employees and suppliers.

How the Joint Solution Works

STA integrates with SSOGEN to allow businesses to securely scale up to support a remote workforce and suppliers, and access applications in the cloud and on premises.

Scale securely in the cloud

Access Management enables you to expand with the confidence you are secure. Protect all cloud and on-prem apps with centralized policies and a range of authentication methods.

Security at the access point

STA enforces access policies and the appropriate level of authentication to assess human users, applications, APIs and connected devices accessing the SSOGEN SAML Gateway, protecting businesses from unauthorized access and reducing the risk of a data breach.

Combining STA with the SSOGEN SAML Gateway, authorized users can access both cloud-based and on-prem applications, including complex ERP applications, using a modern authentication method.

Key Benefits

Together, STA and SSOGEN let you control access to critical systems without hindering the work authorized users need to perform. STA authenticates and enables authorized users and entities to access cloud-based apps-including the SSOGEN SAML Gateway. Working with STA, SSOGEN provides secure access to on-premises apps. Together, we provide stronger IT security, increased productivity and a better user experience.

About SSOGEN

SSOGEN helps organizations implement web security, protect mission critical applications, and prevent cyber criminals from stealing confidential data, while bringing the best user experience to employees and associates.

SSOGEN's mission is to provide NextGen SSO Security Solutions, simplify SSO Integrations, and make SSO affordable to the world.

About Thales Access Management

Thales's industry-leading Access Management and Authentication solutions let enterprises centrally manage and secure access to enterprise IT, web, and cloud-based applications with a Zero Trust approach. Utilizing policy-based conditional access, rigorous SSO, and universal authentication methods, enterprises can effectively prevent breaches, migrate securely to the cloud and simplify regulatory compliance.
