THALES
Building a future we can all trust

Thales Data Protection on Demand Services

Thales Data Protection on Demand is a cloud-based platform that provides a wide range of Cloud HSM and key management services through a simple online marketplace. With Luna Cloud HSM and CipherTrust Key Management services on Data Protection on Demand (DPoD), security is made simpler, more cost effective and easier to manage because there is no hardware to buy, deploy and maintain. Just click and deploy the protection you need, provision services, add security policies and get usage reporting in minutes.

With a growing menu of cloud based security applications at your fingertips, including hundreds that work with the industry standard PKCS11 interface, select the security service you require from an expanding range of options and integrations.

Data Protection on Demand provides you with security you can trust:

- Secure cloud data
- Isolate keys and signing operations from certificate authorities, host platforms, and operating systems
- Automate key lifecycle control and processes
- Auto scale services at the click of a button
- Proven reliability with 99.95% SLA
- Set up a security service in under 5 minutes

Luna Cloud HSM Services

Luna Cloud HSM

Set up and access a Cloud HSM service for your organization's cryptographic operations

HSMs are a secure and trusted mechanism used to protect cryptographic keys and secrets. You can use your HSM to generate and/or store cryptographic keys, establishing a common root of trust across all applications and services. You can also use your HSM to perform cryptographic operations such as encryption/decryption of Data Encryption keys, protection of secrets (passwords, SSH keys, etc.), and more.

Luna Cloud HSM for CyberArk

Secure CyberArk Privileged Access Security Solution's top-level encryption key within an HSM

Luna Cloud HSM for CyberArk provides a root of trust for the CyberArk Privileged Access Security Solution's top-level encryption key in an HSM. Luna Cloud HSM for CyberArk generates and stores the server keys, providing private key protection and strong entropy for key generation for CyberArk Privileged Access Security Solution system keys.

Luna Cloud HSM for Digital Signing

Digitally sign the author of software and firmware packages or electronic documents to ensure the integrity of the sender

Digital Signatures are used to establish the identity of the publisher of documents, software and firmware packages, and to prove the integrity of the signed data. Compromise of digital signature keys allow attackers to impersonate the original author and create their own malicious updates (malware). Digital Signing services within Data Protection on Demand protect the private keys associated with signing applications in a HSM service and prevent compromise or theft private keys.

Luna Cloud HSM for Hyperledger

Bring trust to blockchain transactions to perform the required cryptographic operations across distributed systems

Luna Cloud HSM for Hyperledger stores the private keys used by blockchain Hyperledger members to sign all transactions, and ensures cryptographic keys cannot be used by unauthorized devices or people for a range of blockchain Hyperledger applications. Luna Cloud HSM for Hyperledger provides high assurance security in data centers and the cloud, enabling multi-tenancy of blockchain identities per partition as proof of transaction and for auditing requirements.

Luna Cloud HSM for Java Code Signer

Generate and protect the private keys associated with your Java Code Signer application in an HSM

With Luna Cloud HSM for Java Code Signer you can prevent private keys from being stolen or compromised by off-loading Java application server cryptographic operations to an HSM. Security is significantly enhanced by generating signing keys and certificates using HSM entropy and Java code signing crypto operations are performed inside the Luna Cloud HSM Service. In addition, this improves performance as cryptographic operations are off-loaded from the signing servers.

Luna Cloud HSM for Microsoft Active Directory Certificate Services

Secure the keys of your Microsoft Root Certificate Authority (CA) in an HSM

Luna Cloud HSM for Microsoft ADCS (Active Directory Certificate Services) provides a root of trust for Microsoft Root Certificate Authority (CA) signing key in an HSM. This enforces hardened boundaries for the CA's root cryptographic signing key, which is used to sign the public keys of certificate holders. By providing the root of trust for the CA's public key Microsoft's security is bolstered for example when configuring applications servers hosting Microsoft ADCS in dispersed data centers.

Luna Cloud HSM for Microsoft Authenticode

Generate and secure your Microsoft Authenticode certificates on an HSM

Luna Cloud HSM for Microsoft Authenticode provides hardened boundaries for Microsoft Authenticode digital certificates. The Luna Cloud HSM service integrates with Microsoft Authenticode to provide a trusted system for protecting the organizational credentials of the software publisher, and secures the keys used by the code signing application within the HSM service. Luna Cloud HSM for Microsoft Authenticode ensures relevant Microsoft systems, software and hardware products meet approved standards, and prevent signing keys being accessed by unauthorized entities.

Luna Cloud HSM for Microsoft SQL Server

Off-load Microsoft SQL Server cryptographic operations to an HSM

The Luna Cloud HSM service provides root of trust for storage of keys used in Microsoft SQL so that encryption keys do not reside with encryption data. Data can be encrypted by using encryption keys that only the database user has access to on in the Luna Cloud HSM service and cryptographic operations such as key creation, encryption, decryption, etc. can be offloaded to the HSM.

Luna Cloud HSM for Oracle TDE

Ensure that Oracle TDE encryption keys are protected by a master key that resides within the HSM

Encryption keys are generally stored locally with the database for performance and scalability reasons but this introduces the challenge of how to protect the encryption keys that were used to encrypt the data. The solution is to protect the local encryption keys, commonly referred to as Data Encryption Keys (DEK) with a Key Encryption Key (KEK) or Master key that resides in the Luna Cloud HSM service key vault. This ensures that only authorized services are allowed to request the DEK to be decrypted.

Luna Cloud HSM for PKI Private Key Protection

Secure private keys belonging to Certificate Authorities responsible for establishing PKI trust hierarchy.

PKI root keys are the private keys belonging to the Certificate Authority (CA) responsible for establishing the PKI trust hierarchy. Root Certificate Authorities are the anchor of trust in PKI deployments and compromise of the CA keys would compromise the entire PKI trust hierarchy, leaving your data at risk. PKI Private Key Protection establishes trust by protecting your private keys.

Luna HSM Backup

Backup and restore for your organization's on-premises Luna HSMs

Luna HSM Backup is a Luna Cloud HSM service offering that provides a dedicated backup and restore location for your organization's on-premises Luna HSMs. With Luna HSMs, you can securely backup and restore HSM key material. The keys are directly cloned and can flow from on-premises to cloud and cloud to on-premises. Automatic key replication is enabled for backup to Luna Cloud HSM, Luna HSMs on-premises (including Luna Backup HSM) and also for Azure, IBM and AWS dedicated Luna HSMs (PED support in Q3 2020). When backing up to Luna Cloud HSM Services, you can be assured that the backup is to a resilient Luna Cloud HSM service (99.95% SLA), and your keys are securely stored in NIST FIPS 140-2 Level 3 certified hardware.

Luna Cloud HSM with Key Export

Export high quality private asymmetric keys from the HSM for use on other devices.

This mode is designed for generating key pairs for identity issuance, where transient key-pairs are generated, wrapped off, and embedded on a device. They are not used on the HSM, but generated and issued securely, and then deleted from the HSM.

The Luna Cloud HSM key export facility provides a simple cloud based key export that is fast to deploy and easy to export. Unlike traditional software based solutions that have limited security and auditability, Luna Cloud HSM services ensure a FIPS certified key generation solution.

CipherTrust Key Management Services

Key Broker for Azure

Securely generate and import cryptographic keys to into Azure Key Vault, enabling BYOK for Microsoft infrastructure

The Key Broker for Azure service provides you with a capability to securely generate and upload cryptographic keys to Azure Key Vaults, enabling Bring Your Own Key (BYOK) capabilities as a cloud-based service, powered by DPoD.

Key Broker for Google Cloud EKM

Create and control encryption keys outside of Google Cloud

CipherTrust Key Broker is integrated with Google Cloud EKM to make it easy for organizations to follow security and key management best practices, while leveraging the power of Google Cloud for compute and analytics.

Key Broker for Salesforce

Create key material (tenant secrets) for Salesforce and manage your keys and security policies in concert with Salesforce Shield across their lifecycle

Using the CipherTrust Key Broker, you can design and enforce policies, helping to ensure compliance. To further ensure the security and privacy of your data, you can Bring Your Own Key (BYOK) within the Data Protection service in the cloud. Providing a service layer (GUI/API), CipherTrust Key Broker enables you to create key material (Salesforce tenant secret) for Salesforce and to manage your keys in concert with Salesforce Shield across their lifecycle.

Partner Services

Keyfactor Code Assure

Code Signing at the Speed of DevOps, securely sign any code, anywhere

Keyfactor Code Assure centralizes code signing operations into a single intuitive platform. Developers can have the freedom to quickly sign any code, from anywhere, while keys remain locked in a secure vault.

Keyfactor Control

The end-to-end secure identity platform for connected devices

Keyfactor Control makes it easy and affordable to embed high-assurance secure identity into every step of the IoT device lifecycle. Through design, manufacturing, deployment and ongoing management, Keyfactor Control provides the identity foundation you need to produce and sustain the most secure devices on the market – giving you the freedom to design great products and the confidence that they'll deploy and remain secure throughout their use.

Keyfactor Command

Secure digital identity for the entire enterprise

Keyfactor Command is the world's most complete and scalable cloud-based certificate management platform, providing the freedom to secure every identity across the enterprise. Get all the benefits of owning PKI without the risks. Absolutely, positively need to run it yourself? Keyfactor Command is also available for client-hosted environments.

KeyTalk PKI Management

KeyTalk's Certificate Key Management System (CKMS) automates the management, distribution and installation of certificates (PKI) from multiple public and internal CA's to any endpoint device running on any OS.

KeyTalk Secure E-mail Service

The Key Talk Secure E-mail service is based on the fully automated enrolment, installation and configuration of S/MIME certificates.

KeyTalk Secure Email is a unique, patented solution that not only creates the certificates, but also manages the keys.

GaraSign

Securely manage keys, certificates, users, and permissions for all your DPoD-protected keys. Private keys stay in the HSM at all times, while cryptographic operations remain simple, fast, and secure.

PrimeKey EJBCS Cloud

The cloud version of EJBCS is a powerful, flexible Certificate Authority and complete PKI, in the cloud.

PrimeKey EJBCS Software

EJBCS Software is a powerful and flexible Certificate Authority and a complete PKI (Public Key Infrastructure) Management System.

PrimeKey SignServer Cloud

The cloud version of SignServer is a server-side digital signature software used to sign any digital document, and more on AWS and Azure.

PrimeKey SignServer Software

Server-side digital signatures give maximum control and security, allowing your staff and applications to conveniently sign code and documents.

Venafi Platform

Automate Machine Identities (Keys & Certificates) with Venafi

Venafi orchestrates connections to machines needing certificates, while protecting cryptographic keys with Thales Luna HSMs. This solution delivers full visibility, centralized control and full automation over HTTPS web application keys and certificates. All keys are generated, stored, and used for within the safe confines of Luna HSMs to reduce the risk of unauthorized data access and loss.

About Thales

The people you rely on to protect your privacy rely on Thales to protect their data. When it comes to data security, organizations are faced with an increasing number of decisive moments. Whether the moment is building an encryption strategy, moving to the cloud, or meeting compliance mandates, you can rely on Thales to secure your digital transformation.

Decisive technology for decisive moments.
